SHIVEN DASHORA

Bengaluru, Karnataka | shiven.dashora@gmail.com | 8827661310 | Github | LinkendIn

PROFESSIONAL SUMMARY

Full-stack software engineer and AI/ML undergraduate with experience building healthcare platforms using React, Next.js, Node.js, PostgreSQL, Docker, and AWS. Also worked on independent projects covering medical imaging, real-time platforms, and service management tools. Comfortable owning features end-to-end, from UI to database schema to deployment.

EXPERIENCE

Full-Stack Software Engineer | Origin Medical Research Lab *May 2025 – Present | Bengaluru, Karnataka*

- Contributed in building configurable AI-assisted measurement tools that let clinicians validate and adjust results directly within acquisition workflows.
- Worked across the dashboard, DICOM viewer, and acquisition preview screens to support these workflows end-to-end as part of **imaging software**.
- Contributed to the **reporting software** as an on-premise extension to the imaging platform.
- Built image archiving and downloadable export pipelines so studies remain accessible and portable.
- Implemented MWL (Modality Worklist) handling and PACS integrations to keep patient and scheduling data synced with hospital imaging systems.
- Contributed in building dynamic tech sheet/template generation engine, letting clinicians customize report layouts per study type without hardcoding new templates.
- Extended the reporting platform into a **Practice Management System** by designing and building scheduling and billing modules from the ground up.
- Consolidated workflows that were previously handled manually or across separate tools, cutting administrative overhead and improving productivity for sonographers.
- Worked across the full stack — React, Next.js, Node.js, TypeScript, PostgreSQL, Docker, CI/CD pipelines, and AWS following FDA compliance standards.

PROJECTS

DICOM Media Viewer Tool | *Web-Based Medical Imaging Viewer | Nuxt.js, Vue, TypeScript*

- Built a browser-based DICOM and media viewer using Nuxt.js, Vue, and TypeScript, structured with reusable components and composables to render and inspect medical imaging files without desktop software.
- Deployed on Vercel for instant browser access,

Nexus | *Real-Time Chat & File Sharing Platform | Next.js, TypeScript, Nest.js*

- Built a real-time chat and file-sharing platform with a Next.js/TypeScript frontend and a Nest.js/TypeScript microservices backend, split into dedicated auth and API gateway services.
- Implemented an API gateway to route requests across independent microservices, improving scalability, fault isolation, and separation of concerns.

Service Ticket Manager | *General-Purpose Ticketing & Service Request Platform*

- Built a JIRA-style ticketing platform generalized for non-software service requests, supporting ticket creation, assignment, status tracking, and resolution workflows across teams.
- Designed role-based access and ticket routing to streamline request handling for [service teams / departments], reducing manual triage effort.

EDUCATION

B.E., Artificial Intelligence and Machine Learning *Expected May 2025*

BNM Institute of Technology, Bengaluru, Karnataka | CGPA: 8.0 / 10.0

High Schooling *2019 – 2021*

Aditya Birla Public School, Neemuch, Madhya Pradesh | Class 10: 87.6% | Class 12: 92.4%

SKILLS

Languages & Frameworks: Python, Java, JavaScript, TypeScript, ReactJS, Next.js, Node.js, React Native, Flask, FastAPI, NestJS

Data & Databases: PostgreSQL, pandas, NumPy, scikit-learn

DevOps & Architecture: Docker, Microservices Architecture, System Design, CI/CD (GitHub Actions), AWS EC2

Coursework: Artificial Intelligence, Web Development, Operating Systems, Networking Systems, Computer Organization
